

## Year 9

## PERIMETER AND CIRCUMFERENCE

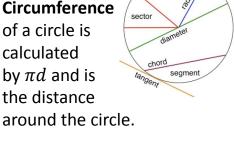

## **Key Concepts**

Parts of a circle

Circumference of a circle is calculated by  $\pi d$  and is the distance

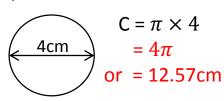

Arc length of a sector is calculated by  $\frac{\theta}{360}\pi d$ .

#### Calculate:

a) Circumference

b) **Diameter** when the circumference is 20cm

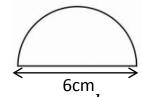

$$C = \pi \times d$$

$$20 = \pi \times d$$

$$\frac{20}{\pi} = d$$
Or 6.37cm

## **Examples**

c) **Perimeter** 

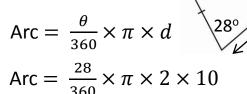

$$P = \frac{\pi \times d}{2} + d$$

$$P = \frac{\pi \times 6}{2} + 6$$

$$P=3\pi+6$$

$$Or = 15.42cm$$

d) Arc length

$$Arc = \frac{28}{360} \times \pi \times 20$$

$$Arc = \frac{14}{9}\pi$$

$$Or = 4.89cm$$

A hegartymaths 534, 535, 537, 538, 541, 544-545

### **Key Words**

Circle

Perimeter

Circumference

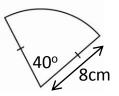

Radius Diameter

Ρi

Arc

#### Calculate:

- The circumference of a circle with a diameter of 12cm
- The diameter of a circle with a circumference of 30cm
- 3) The perimeter of a semicircle with diameter 15cm
- 4) The arc length of the diagram

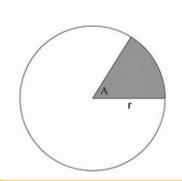

# Year 9 AREA OF CIRCLES AND PART CIRCLES

## **Key Concepts**

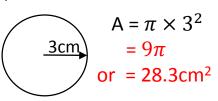

The **area** of a circle is calculated by  $\pi r^2$ 

The **area of a sector** is calculated by  $\frac{A}{360}\pi r^2$ 

#### Calculate:

a) Area

b) **Radius** when the area is 20cm<sup>2</sup>

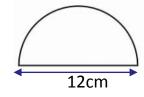

$$A = \pi \times r^{2}$$

$$20 = \pi \times r^{2}$$

$$\frac{20}{\pi} = r^{2}$$
Or 2.52cm

## **Examples**

c) Area

$$P = \frac{\pi \times r^2}{2}$$

$$P = \frac{\pi \times 6^2}{2}$$

$$P = 18\pi$$

$$Or = 56.55 cm^2$$

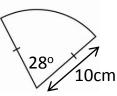

d) Area of a sector

$$Arc = \frac{\theta}{360} \times \pi \times r^2$$

$$Arc = \frac{28}{360} \times \pi \times 10^2$$

$$Arc = \frac{28}{360} \times \pi \times 100$$

Arc = 
$$\frac{70}{9}\pi$$
  
Or = 24.43cm

## A hegartymaths

539, 540, 542-543, 546-547

### **Key Words**

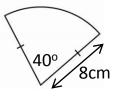

Circle Area Radius

Diameter Pi

Sector

#### Calculate:

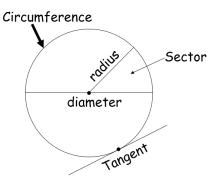

- 1) The area of a circle with a radius of 9cm
- 2) The radius of a circle with an area of 45cm<sup>2</sup>
- 3) The area of a semicircle with diameter of 16cm
- 4) The area of the sector in the diagram

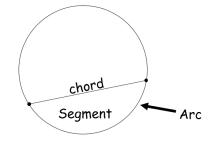

# Year 9 CIRCLES AND COMPOUND AREA

## **Key Concepts**

hegartymaths
Clip Numbers
534-547,
556, 592

#### **Key Words**

**Diameter:** Distance from one side of the circle to the other, going through the centre.

**Radius:** Distance from the centre of a circle to the circumference.

**Chord:** A line that intersects the circle at two points.

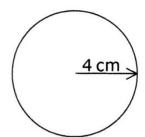

**Tangent:** A line that touches the circle at only one point.

#### Compound (shape):

More than one shape joined to make a different shape.

## **Examples**

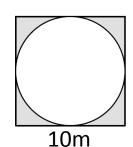

Find the area and circumference to 2dp.

Circumference =  $\pi \times d$ =  $\pi \times 8 = 25.13$ cm

$$Area = \pi \times r^2$$
$$= \pi \times 4^2 = 50.27cm^2$$

Find shaded area to 2dp.

Square area = 
$$10 \times 10$$
  
=  $100m^2$ 

Circle area = 
$$\pi \times r^2$$
  
=  $\pi \times 5^2$   
=  $78.54 m^2$ 

Shaded area =  $100 - 78.54 = 21.46m^2$ 

#### Tip

If you don't have a calculator you can leave your answer in terms of  $\pi$ .

#### **Formula**

Circle Area =  $\pi \times r^2$ Circumference =  $\pi \times d$ 

#### Questions

- 1) Find to 1dp the area and circumference of a circle with:
- a) Radius = 5cm b) Diameter = 12mm
- c) Radius = 9m
- 2) Find the area & perimeter of a semi-circle with diameter of 15cm.

ANSWERS: 1) a) A = 78.5cm<sup>2</sup>, C = 31.4cm b) A = 113.1mm<sup>2</sup>, C = 37.7mm c) A = 254.5m<sup>2</sup>, C = 56.5m 2) A = 88.4cm<sup>2</sup>, P = 38.6cm

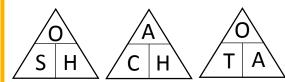

# Year 9 PYTHAGORAS AND TRIGONOMETRY

#### **Key Concepts**

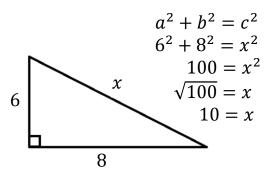

Pythagoras' theorem and basic trigonometry both only work with **right** angled triangles.

**Pythagoras' Theorem** – used to find a missing length when two sides are known  $a^2 + b^2 = c^2$  c is always the hypotenuse (longest side)

## Basic trigonometry SOHCAHTOA – used to find a missing side or an angle

## Pythagoras' Theorem

$$a^{2} + b^{2} = c^{2}$$

$$y^{2} + 8^{2} = 12^{2}$$

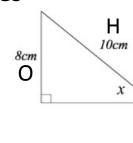

$$y^{2} = 12^{2} - 8^{2}$$

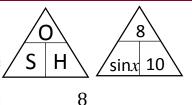

$$y^{2} = 80$$

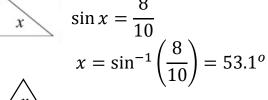

$$y = \sqrt{80}$$

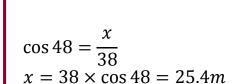

$$y = 8.9$$

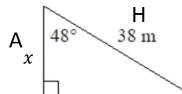

## **Examples**

# A hegartymaths

498-499*,* 509-515

#### **Key Words**

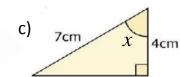

Right angled triangle
Hypotenuse
Opposite
Adjacent
Sine
Cosine
Tangent

## Find the value of *x*.

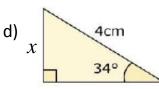

b)

a) X

Questions

# Year 9 VOLUME AND SURFACE AREA OF PRISMS

## **Key Concept**

The **volume** of an object is the amount of space that it occupies. It is measured in units cubed e.g. cm<sup>3</sup>.

To calculate the volume of any prism we use:

 $\frac{area\ of}{cross\ section} \times length$ 

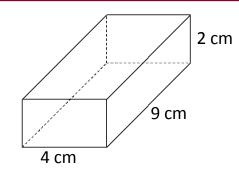

A **prism** is a 3D shape which has a continuous cross-section.

The **surface area** of an object is the sum of the area of all of its faces. It is measured in units squared e.g. cm<sup>2</sup>.

## **Examples**

$$Volume = 4 \times 9 \times 2$$
$$= 72cm^3$$

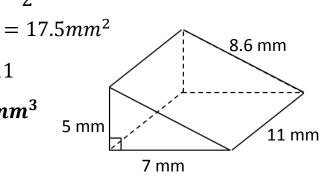

Front = 
$$4 \times 2 = 8$$
  
Back =  $4 \times 2 = 8$   
Side 1 =  $9 \times 2 = 18$   
Side 2 =  $9 \times 2 = 18$   
Bottom =  $4 \times 9 = 36$   
 $Top = 4 \times 9 = 36$   
Total =  $124cm^2$ 

Area of triangle = 
$$\frac{5 \times 7}{2}$$

 $Volume = 17.5 \times 11$ 

 $= 192.5 mm^3$ 

## Surface area:

Front = 
$$\frac{7 \times 5}{2}$$
 = 17.5  
Back =  $\frac{7 \times 5}{2}$  = 17.5  
Side =  $5 \times 11 = 55$   
Bottom =  $7 \times 11 = 77$   
Top =  $11 \times 8.6 = 94.6$   
Total = **261**.6cm<sup>2</sup>

# A hegartymaths

568-571, 584-586

## **Key Words**

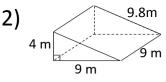

Volume
Capacity
Prism
Surface area
Face

Find the volume and surface area of each of these prisms:

8 cm

40 cm

ANSWERS: 1)Volume = 5760 cm $^3$  Surface area = 2368 cm $^2$  D) Volume = 162 m $^3$  Surface area = 241.2m $^2$ 

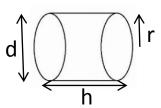

# Year 9

## **VOLUME AND SURFACE AREAS OF CYLINDERS**

## **Key Concepts**

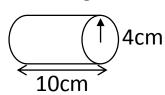

A **cylinder** is a **prism** with the cross section of a circle.

The **volume** of a cylinder is calculated by  $\pi r^2 h$  and is the space inside the 3D shape

The **surface area** of a cylinder is calculated by  $2\pi r^2 + \pi dh$  and is the total of the areas of all the faces on the shape.

From the diagram calculate:

a) Volume

$$V = \pi \times r^2 \times h$$

$$V = \pi \times 4^2 \times 10$$

$$V = 160\pi$$

$$Or = 502.65cm^3$$

Examples

b) Surface Area – You can use the net of the shape to help you

Area of two circles  $= 2 \times \pi \times r^2$ 

$$= 2 \times \pi \times 4^2$$

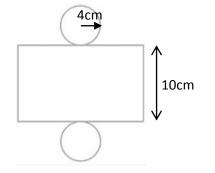

$$=32\pi$$

Area of rectangle

$$= \pi \times d \times h$$

$$=\pi \times 8 \times 10$$

$$=80\pi$$

Surface Area = 
$$32\pi + 80\pi$$
  
=  $112\pi$   
or =  $351.86cm^3$ 

# A hegartymaths

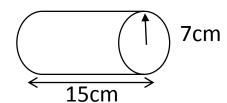

572, 586

**Key Words** 

Cylinder
Surface Area
Radius
Diameter

Pi

Volume Prism Calculate the volume and surface area of this cylinder

# Year 9 **BOUNDARIES**

## **Key Concepts**

The boundaries of a number derive from rounding.

E.g. State the boundaries of 360 when it has been rounded to 2 significant figures:

$$355 \le x < 365$$

E.g. State the boundaries of 4.5 when it has been rounded to 2 decimal place:

$$4.45 \le x < 4.55$$

These boundaries can also be called the error interval of a number.

	+	-	×	÷
Upper bound answer	UB <sub>1</sub> + UB <sub>2</sub>	UB <sub>1</sub> - LB <sub>2</sub>	$UB_1 \times UB_2$	$UB_1 \div LB_2$
Lower bound answer	LB <sub>1</sub> + LB <sub>2</sub>	LB <sub>1</sub> - UB <sub>2</sub>	$LB_1 \times LB_2$	$LB_1 \div UB_2$

A restaurant provides a cuboid stick of butter to each table. The dimensions are 30mm by 30mm by 80mm, correct to the nearest 5mm. Calculate the upper and lower bounds of the volume of the butter.

$$Volume = l \times w \times h$$

Upper bound = 
$$32.5 \times 82.5 \times 32.5$$
  
=  $87140.63mm^3$ 

Lower bound = 
$$27.5 \times 77.5 \times 27.5$$
  
=  $58609.38mm^3$ 

## **Examples**

When completing calculations involving boundaries we are aiming to find the greatest or smallest answer.

$$D = \frac{x}{y}$$
  $x = 99.7$  correct to 1 decimal place.  
 $y = 67$  correct to 2 significant figures.  
Work out an upper and lower bounds for  $D$ .

*Upper bound D* = 
$$\frac{99.75}{66.5}$$
 = 1.5

Lower bound 
$$D = \frac{99.65}{67.5} = 1.48$$

# A hegartymaths

137-139,

## Kev Words

Bound Upper Lower Accuracy Rounding 1) Jada has 100 litres of oil, correct to the nearest litre.

The oil is poured into tins of volume 1.5 litres, correct to one decimal place. Calculate the upper and lower bounds for the number of tins that can be filled.

2) There are 110 identical marbles in a bag. A marble is taken and weighed as 15.6 g to the nearest tenth of a gram. Find the upper and lower bounds for the weight of all the marbles.
